**DETAILED ACTION**

This case has been transferred to Examiner Kelly Jerabek. Please direct all future correspondence to Examiner Jerabek whose contact information can be found at the end of this office action.

***Allowable Subject Matter***

Claims 5-13 and 19 allowed.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fail to anticipate or render obvious the following technical features as recited in the highlighted claims:

Re claim 5, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the transmitter transmits the digital data to a place remote from the camera and a controller for inhibiting the transmitter from transmitting the digital image data to a place where the watermark caused by the selected program is not available.

Re claim 6, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding

circuit and a transmitter, wherein the transmitter transmits the digital data to a place remote from the camera and a controller for replacing the selection of the program if the digital image data is to be transmitted to a place where the watermark caused by the selected program is not available.

Re claim 7, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the transmitter transmits the digital data to a place remote from the camera and a controller for giving a warning if the digital image data is to be transmitted to a place where the watermark caused by the selected program is not available.

Re claim 8, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the controller inhibits the transmitter from transmitting the digital image data on which the watermark is failed to be embedded.

Re claim 10, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the controller controls the embedding circuit to surely embed the watermark on the digital image data on which the watermark is failed to be embedded.

Re claim 12, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the controller gives a warning if the watermark is failed to be embedded.

Re claim 19, the prior art fails to teach or suggest a digital camera comprising an imaging device, a memory, a program selector, an embedding circuit and a transmitter, wherein the controller forcibly controls the embedding circuit to embed the watermark if the setting by the setting circuit is failed.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Itoh et al. (US 6,700,989) discloses a device for generating a watermarked moving image having a copy preventing capability. The information regarding inserting watermark information into an image is relevant material.

Kondo et al. (US 6,567,531) discloses an image processing apparatus. The information regarding embedding information in an image is relevant material.

Hogan (US 6,137,952) discloses an apparatus and method for degrading the quality of unauthorized copies of color images. The information regarding including a watermark in an image is relevant material.

Knox (US 6,128,411) discloses a method for embedding one or more digital images within another digital image. The information regarding including a watermark in an image is relevant material.
